ABSTRACT OF THE DISCLOSURE

10 A mobile interface device receiving input from a
stylus is provided to remotely control application
programs running on a host computer. Such an interface
device provides convenient access to any resource of
the host computer, including, for example, a sharable
15 database. An embodiment of such an interface device
includes a pen-based graphical interface which
communicates with an operating system on the host
computer. In that embodiment, the operating system on
the host computer has handwriting recognition
20 capability.
